RE: Peter Chevozerov  
D.O.B: 07-08-1974

### TO WHOM IT MAY CONCERN

Mr Peter Chevozerov is a patient of mine since 2013. He has a history of Kidney Stones of unknown etiology. He consistently makes stones, his urine PH is usually acidic but doesn't seem to have Renal Tubular Acidosis.

Mr Chevozerov is consistently on Polycitro K to alkalize his urine but still developed multiple stones which he passes on occasion. He has had multiple uretero-scopy but continues to manufacture stones. Recently he has passed some larger stones.

His 24hr urine collection does not fit a particular pattern and was significant for hyper magnesium. His blood was consistent with hyperurecemia. We have been unable to get a stone analysis.

Presently, he still has occasional stone crisis which is managed with fluids, pain medication and polycitro K.

Sincerely

**Jr. Dwayne Thwaites MD**
